

What Is Bearcat Circle?

Bearcat Circle is a Web application that aims to **simulate** the in-person learning experience and aid with remote learning. The application combines existing communication software all into one **easy-to-use** package. Students can post discussions, chat with other students and much more. Bearcat Circle makes it easy for students to **explore** and branch out of their existing circle.

Why?

While applications like Slack, Teams and Discord exist for communication, they do little to **encourage interactions** with other students.

A student would need to go through **multiple steps** to find a community or student to connect with.

Bearcat Circle provides a solution to the question: "**How can I meet other students online?**".
